

A CHECKLIST FOR MAKING CHILD PIP HAPPEN

For Child PIP to be sustainably implemented, it is important to understand and recognise the fundamental components of the mortality audit process, to make a commitment to doing them the Child PIP way, and to assign responsibility to the key operational elements of the Child PIP process.

This checklist helps you assess whether your hospital is ready to do it the Child PIP way.

Hospital Name: _____

Date: _____

Principles to which we are committed		
Systematic mortality review directed at improving the quality of care that children receive in the health system, is necessary		✓
ChIP, and its structured mortality review framework, is what we will use in our hospital		✓
The ChIP 4-component mortality review process will be followed		✓
The ChIP mortality review meeting agenda will be followed		✓
Data will be systematically gathered, entered and analysed		✓
Data will be forwarded to the SA ChIP database in February and August		✓
There will be one dedicated computer for data entry in each site		✓
Review Process	Who	
24 hour review:	All deaths and DOA's	
Preparatory meeting:	Task review Statistics Case selection	
Mortality meeting:	Chairperson Minutes Presenter	
Report:	Compiling & writing	
Data Management		
Tracking:	Outpatients/Casualty Inpatients	
Paper:	Monthly tallies Deaths	
Software:	Data Entry Data Export	
Name	Cell & email	
My provincial co-ordinator:		
In February and August, I send national data to:
